  Aryan Choudhary
  Apurva Nandan

# Accountant in your pocket.

# Target Audience -

Significant portion of Jio users belong to Lower and lower middle class of the society, who are particular about their income/expenditure and care about every transaction they make.

# What does it do ?

It keeps a record of your all transactions.

It helps in the easy splitting of bills.

Keep record money lent to and from others

# Expenditure records -

Our app also includes expenditure records for daily expenses categorised into common verticals like shopping, healthcare, food etc.

This helps people particular about their daily expenses to track down their daily expenses digitally on the go.
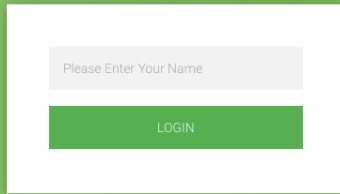

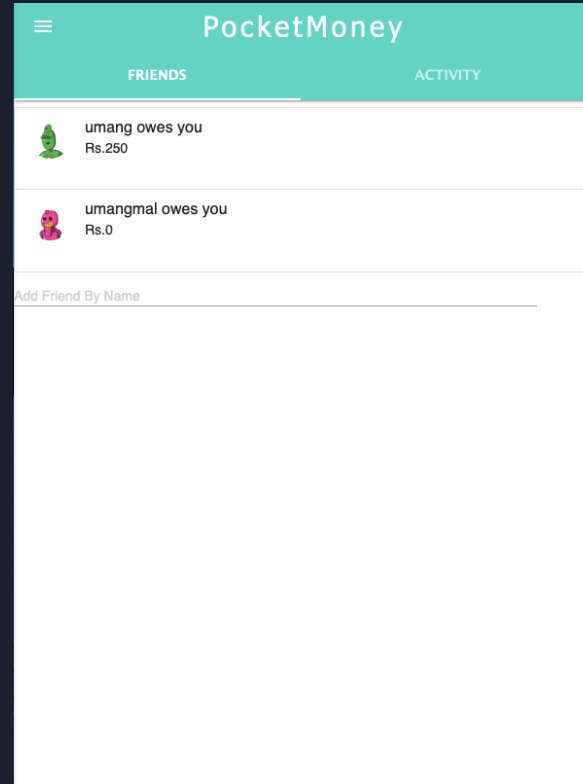

# How we built it?

It was built using nodejs/express, HTML5, and JavaScript.

Can be easily packaged into feature phones.

EXPENSES

Food
Rs.250
Went to McD.

Healthcare
Rs.550
Vaccination of kids

# Things we are proud of-

Lots of scalable API's have been developed which can be directly used for customization like-

- Group sharing
- Money settlement
- Expense analysis

# What's next for Pocket Money?

It can be integrated with JioMoney, NFC and other money sharing apps.

It can be integrated with smart watches as well (expense tracking)

It can be extended for groups as well.

Thank You
